

Simple Duets 3

Additional General Painting Instructions

Sponging

Wet the sponge and squeeze it until all excess water has been removed. Dab it into the paint and then pounce it gently on the palette to distribute the paint before proceeding to the project surface.

Metal Prep

Scuff the area to be painted with sand paper and wipe with a dry cloth. Following the manufacturer's instructions, spray the area to be painted with primer. Allow this to cure several hours before proceeding with the basecoat.

Pail Assembly

When using screws: turn the pail upside down and mark the areas for the four holes. Use an awl to poke the holes and then screw the legs onto the pail.

When using glue: turn the pail upside down and mark the areas for the legs. Glue the legs to the pail with a strong adhesive glue.
